The Great Pollution of Europe. Started in 2025, but the current time is 2033. Set in Poland, Krakow. Every country in Europe has been affected by this Great Pollution to the point where some countries are just simply inhabitable at this point, Krakow has become the epicentre for a lot of refugees to come in and hide. Poland has been one of the last countries affected by the "Great Pollution" which has stroke Europe. In Krakow a lot of people have gathered in groups and have been using the Industrial areas as their home, which eventually created communities of survivors. These industrial areas which have run-down buildings and some of them even just have a field are now filled with people, tents, and rubbish. These communities are calling themselves "Shelter", some of these "Shelters" have electricity, these "Shelters" are protected by armed-forces especially the ones with electricity, reason for that is majority, around 70% of the countries and lands don't have anymore electricity and even clean water can't be accessed that easily. A lot of people gather in these "shelters" because of the food resources that they poses and because of the electricity, but will you be accepted? what can you offer that they don't have? These are the questions that are asked in those "shelters" ... the world has moved backwards your "skills" are more valuable than money, if you can't provide anything useful, you might as well be...dead.
